//note="Organ: ovary; Vector: pBluescript II KS(+); Site_1:
ECORI; Site_2: Notl; This normalized library was
constructed from 1 million independent clones. CDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with ECORI
, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pools of total RNA isolated from each tissue (embryonic muscle 33.3%; juvenile muscle 33.3%; and epiphyseal growth plate 33.3% of the final RNA pool). Single pass sequencing from 5'-end"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /clone libe "CSEQCHN69"
/note="Organ: brain; Vector: pBluescript II KS(+); Site_1:
EcoRI; Site_2: Not1; This normalized library was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to Not1 adapters, digested with EcoRI
pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1966): 791, except that a significantly longer reannealing hybridization was used."

```
, size-selected, and cloned into the Not1 and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridiation was used."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 30,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                | SIDS1/gcgdata/geneseq/geneseqn-embl/NA1980.DAT:*

                                                                                                               300
                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, tellangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, isohaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of anglogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial anglogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, anglofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, isohaemic limb anglogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        plaque neovascularisation; telangiectasia; haemophiliac joints; angiofibroma; wound granulation; coronary collateral; ecrebral collateral; arteriovenous malformation; ischaemic limb angiogenesis; diabetic neovascularisation; fracture; cytostatic; antiarthritic; antipsoriatic; antidiabetic; ophthalmological;

Intinition between the management of the fusion protein (immunofusing angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including the managiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental collibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of angiofibroma, wound granulation, and excessive or abnormal stimulation of hypertrophic scars, i.e. kelolid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encoding canine endostatin used in the construction of immunofusin containing canine

                        The present sequence encodes human endostatin, an angiogenesis inhibitor, derived from human liver cDNA. This is the C-terminal protecolytic fragment of collagen 18a. Endostatin can inhibit endothelial cell proliferation in vitro and angiogenesis in vivo. This is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the construction of the expression plasmid for the treatment of mammalian diseases, especially cancer. The plasmids can be used for (in vivo) transfection of a cell in situ in order to medulate tumour activity. Anti-angiogenic gene inhibits growth of solid tumour and lung metastatic tumours by intravenous or intramuscular delivery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Plasmids comprising tissue specific transcription elements linked to a

```
protein. When the human endostatin gene sequence AAA27004 is
recombinantly expressed, an observable doublet of protein results, both
versions of which are functional endostatin proteins. The present gene
sequence encodes an endostatin variant which is the same as the protein
encoded by AAA27004 minus the first four amino acids. Recombinant mouse
encoded by AAA27004 minus the first four amino acids. Recombinant mouse
encoded by AAA27004 minus the first four amino acids. Recombinant mouse
encoded by AAA27004 minus the first four amino acids. Recombinant mouse
confortatin (20 mg/kg) was administered subcutanceusly to mice implanted
with Lewis lung carcinomas. There was tumour mass regression
non-detectable levels after 12 days of therapy due to the angiogenesis
inhibitory activity of endostatin. Thus the protein is useful for
treatment of angiogenesis dependent cancers. The polymucleotide and
colypeptide sequences of this endostatin are useful for treating and
diagnosts of tumours, ocular angiogenic diseases, Osher-Webber syndrome,
myocardial angiogenesis, plaque neovascularisation, telangiectasia,
chaemophiliac joints, angiofibroma and wound granulation of endothelial
cells e.g. intestinal adhesions, atherocal agent by reducing or
protein may also be useful as a birth control agent by reducing or
preventing uterine vascularisation. The gene for endostatin may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         eg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             preventing uterine vascularisation. The gene for endostatin may be isolated from cells or tissue that express high levels of endostatin, etumour cells, by generating CDNA from mRNA using reverse transcriptase and then amplifying the DNA sequence.
Novel endostatin capable of inhibiting endothelial cell proliferation and angiogenesis, useful for treating angiogenesis-dependent cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                      The present sequence encodes an alternate functional endostatin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The sequence encodes Human Endostatin(TM) N-terminal deletion mutant lacking the N-terminal 4 amino acids. The new method of the invention is useful for producing, recovering and purifying Endostatin (TM) from biological sources, such as biological fluids, tissues, cells, culture media, and fermentation media. Endostatin(TM) is useful for treating angiogenesis mediated diseases such as solid tumours, blood borne tumours, leukaemias, unuour metastases, benign tumours, e.g. haemangioma, acoustic neuromas, neurofibromas, trachomas, and pyogenic granulomas, rheumatoid arthritis, psoriasis, coular angiogenic diseases, eg., diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, colon

            myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophilac joints, angiofibroma, and wound granulation. Endostatin(TM) is also useful for treating disease of excessive or abnormal stimulation of endothelial cells such as intestinal adhesions, atherosclerosis, scleroderma and hypertrophic scars. Higher yields of more purified, and biologically active Endostatin(TM) are obtained by the new method. Endostatin(TM) can be stored in buffers for extended periods of time, and also subjected to lyophilisation, while preserving biological activity. Centrifugation of broth from fermentation steps in production is avoided, preventing unwanted potential cellular lysis and contamination with additional proteins, pigments, enzymes and other cellular chemicals and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes an endostatin protein which is the carboxy

Anti-angiogenic gene therapy vectors

Disclosure; Page 74; 83pp; English

nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine angiostatin, human or murine endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector This invention describes a novel viral gene therapy vector comprising a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes an angiogenesis inhibiting factor (1), designated IAF-1. The present invention also describes: (1) preparation of (1) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (1) is useful for preparing new biological preparations for effectively treating various tumours and abnormal-vessel diseases. The IAF antibody is preferably a polyclonal antibody, mosaic antibody, single stranded antibody and human originated
 expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Angiogenesis inhibiting factor 1 and its derivative useful for treating

haemangioma, acoustic neuromas, neurofibromas, trachomas, and pyogenic
granulomas, rheumatord arthritis, psoriasis, coular anglogenic diseases,
granulomas, rheumatord arthritis, psoriasis, coular anglogenic diseases,
c.g., diabetic retinopathy retinopathy of prematurity, macular
degeneration, corneal graft rejection, neovascular glaucoma, colon
cancer, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome,
myocardial anglogenesis, plaque neovascularisation, telangiectasia,
haemophiliac joints, anglofibroma, and wound granulation. Endostatin(TM)
is also useful for treating disease of excessive or abnormal stimulation
of endothelial cells such as intestinal adhesions, atherosclerosis,
cof endothelial cells such as intestinal adhesions, atherosclerosis,
scleroderma and hypertrophic sears. Higher yields of more purified, and
biologically active Endostatin(TM) are obtained by the new method.
Endostatin(TM) can be stored in buffers for extended periods of time, and
also subjected to lyophilisation, while preserving biological activity.
Centrifugation of broth from fermentation steps in production is avoided,
difficulty active minimanted protential cellular reference and other continual cellular reference and contained and charter and contained and

This sequence encodes endostatin. Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human angiostatin operably linked to a structural gene encoding one or more domains of human angiostatin. The vector, which may be a replication-defective viral vector, is useful for inhibiting angiogenesis in a mammal, especially with cancer or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

anti-anglogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor growth. The present sequence is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New multifunctional proteins useful for treating angiogenic-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           combinations of angiostatin, endostatin, interferon, thrombospondin, interferon-inducible protein and platelet factor 4, and have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes multifunctional proteins which comprise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4.7%; Score 26; DB 20; Length 552;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       computation an endostatin-encoding nucleic acid. Cells secreting endostatin may be encapsulated and implanted within an individual. The method is used when ocular necvascularisation is caused by histoplasmosis, pathological myopia, angioid streaks, anterior ischaemic optic neuropathy, bacterial endocarditis, Best's disease, blidshot retinochoroidopathy, choroidal neamangioma, choroidal nonperfusion, choroidal neamangioma, choroidal neavi, choroidal nonperfusion, choroidal osteomas, choroidal nonperfusion, choroidal detachment, coloboma of retrapapillary bemartone of the retinal detachment, coloboma of the retinal pigmented epithelium, fundus flavimaculatus, idiopathic, macular hole, malignant melanoma, membranproliferative glomerulonephritis (type II), metalic intraocollar foreign body, morning glory disc syndrome, metalic intraocollar foreign body, morning glory disc syndrome, multiple evanescent white-dot syndrome, neovascularisation of ora serrata, operating microscope burn, optic nerve head pits, photocoagulation, punctate inner choroiditis, subretinal fluid drainage, tiled disc syndrome, Toxoplasma retinochoroiditis, tuberculosis, Vogt-Koyanagi-Harada syndrome, diabetic retinopathy, non-diabetic retinopathy, brain vein occlusion, retinopathy, brain vein occlusion, retinopathy, brain vein occlusion, retinopathy, brain vein occlusion, retinopathy, retinal cryoinjury, retinitis pigmentosa, retinopathy, retinal cryoinjury, retinitis pigmentosa, retinopathy, retinal cryoinjury, retinitis pigmentosa, retinopathy, resinal cryoinjury, retinitis pigmentosa, retinopathy, resinal cryoinjury, retinitis pigmentosa, retinopathy, resinal corneal ulcers, retinopathy menacinal pretinitis simple simple.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                   The present sequence is a partial coding sequence for human endostatin. A claimed method for the treatment of ocular neovascularisation, especially choroidal neovascularisation, involves increasing the level of endostatin in ocular tissue, especially where the endostatin is encoded by the present sequence, or is its fragment, derivative or variant. The increase is effected by administering a viral vector, especially an adenovirus, adeno-associated virus, a retrovirus or lentivirus vector,
                                                        Treating or preventing choroidal neovascularization comprises increasing the amount of endostatin in ocular tissues of afflicted individuals to a choroidal neovascularization inhibiting level -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          interferon-inducible protein; platelet factor 4; anti-anglogenic; anti-tumor; multifunctional protein; anglogenic-mediated disease; cancer; diabetic retinopathy; macular degeneration; arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Preparation of soluble recombinant endostatin involves transforming Streptomycete host with expression vector comprising nucleotide sequence encoding endostatin operably linked to linker and leader peptide

Example 1; Fig 6; 57pp; English.

in Streptomyces. Leader sequences of Streptomyces sp. strain CS snpA and S. venezuelae alpha-amylase proteins are linked to the sordered as a secreted, soluble protein which needs no refolding, is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer, inhibition of tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced. The present sequence encodes human endostatin. The protein is expressed

Sequence 12, Application US/09561108
Patent No. 634221
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Philip E. Thorpe
APPLICANT: Rolf A. Breken
TITLE OF INVENTION: ANTIBODY CONJUGATE COMPOSITIONS FOR SELECTIVELY INHIBITING VEGF
FILE REFERENCE: 4001.002584
CURRENT APPLICATION NUMBER: US/09/561,108
CURRENT FILING DATE: 2000-04-28
RIOR PALICATION NUMBER: 60/131,432
PRIOR FILING DATE: 1999-04-28
NUMBER OF SEQ ID NOS: 44
SOFTWARE: PatentIN Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 12, Application US/09561526

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 12, Application US/09561499

Patent No. 6524583

GENERAL INFORMATION: 3

APPLICANT: Philip E. Thorpe

APPLICANT: Rolf A. Brekken

TILE OF INVENTION: ANTHOON METHODS FOR SELECTIVELY INHIBITING VEGF

FILE REFERENCE: 4001.002582

CURRENT APPLICATION NUMBER: US/09/561,499

CURRENT FILING DATE: 2000-04-28

PRIOR APPLICATION NUMBER: 60/131,432

PRIOR PILING DATE: 1999-04-28

NUMBER OF SEQ ID NOS: 44

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 12

LENGTH: 573
                                                                                                                                                                                                                                                                                                         Gaps

Single pass sequencing. Bases called with phred v0.020425.c and
trimmed with the aid of the trim_alt option. Vector identified with
plate: FQY8006 row: I column: 12
Seq primer: TAGAAGGCACAGTCGAGG.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized placenta library cDNA Library Preparation: M.B. Soares Lab, University of Iowa ESI sequencing: M.B. Soares Lab, University of Iowa Clone distribution: clones will be available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bonaldo,M.F., Lennon,G. and Soares,M.B.
